

Meade LX 10" Telescope Carrying
Case

Hard Case

(Sku# CASELX10)

Congratulations on purchasing your new JMI Telescope Carrying Case! Our carrying cases are molded nearly indestructible ABS polymer and the interior is a custom fit high-density foam to keep your mount components well secured and protected.

A felt bag with keys are also included for the latches which allow you to lock your case.

For the deluxe case, an extendable handle and wheels are pre-installed for easy transport.

To store your Telescope, lay the case flat on a sturdy surface or on the ground with the latches down. Carefully lower the mount into the case by fitting it into the custom pre-cut foam. Make sure the latches are secure with the lid closed before moving the case.

We hope you enjoy your new JMI Telescope Carrying Case!
